In order to determine how many points each question in a chapter test is worth, divide 100 by the number of questions in the test. For example, if there are 10 questions in a test, then each question is worth 10 points (= 100 / 10). So if a student got 9 out of the 10 questions right, then his test score is 90 (= 9 x 10). His letter grade, according to the table above, would then be an A-.
